BOPU expects higher flows in Crow Creek

Cheyenne, WY-The City of Cheyenne, Board of Public Utilities (BOPU) expects elevated flow in Crow Creek. North Crow Reservoir is currently full and Granite and Crystal are anticipated to fill shortly. The natural flows in Crow Creek and its tributaries are expected to pass through these reservoirs, safely flow over the reservoir spillways and return to the creek. The end result means higher than expected flows in Crow Creek east of Curt Gowdy State Park.

The higher flows are not expected to result in flooding but are dependent on localized weather storms. As a reminder, elevated water levels can still be hazardous. Please exercise caution when near Crow Creek and be aware of water levels. Do not attempt to wade or drive through swiftly flowing waters or waters of unknown depth.
